

DEVICE 1064 nm Sub-Nanosecond Laser, Module, PM

OVERVIEW	The Optilab SNL-1064-PM-M is a programmable laser that produces sub-nanosecond pulses with electrical trigger input. It functions as a seed pulse generator for Master Oscillator Power Amplifiers (MOPA). The SPL-1064-PM-M is designed to produce < 1 ns widths and corresponding repetition rates up to 1 MHz from either internal pulse trigger or user's external electrical pulse generator. The SNL-1064-PM-M features an ultra-stable DFB laser diode, centered at 1064 nm transmission wavelength, but with the flexibility to offer other wavelengths. An optional YDFA is available to boost the pulse power. The module is equipped with a standard RS-232 interface for remote control and an OLED display screen for easy user interface, accessible through a front panel adjustment knob. OPTICAL PULSE OUT

The SNL-1064-PM-M has a linear translation from electrical to optical pulses with a 1:1 ratio. The electrical and optical pulses look nearly identical. The following picture shows a typical optical pulse with 750 ps pulse width.
