

# HP 1142A

## HP 1142A Probe Control and Power Module

### Description

The Keysight 1142A Probe Control and Power Module can power and control the 1141A Active Differential Probe, 1144A 800 MHz Active Single-ended Probe and the 1145A 750 MHz Active Single-ended Probe.

### Features & Specifications

- Required for operation of the 1141A Differential Probe, 1144A 800 MHz Active Probe and the 1145A 750 MHz Active Probe for SMD
- Controls input coupling modes dc, dc with variable offset, and dc reject
- Includes power cable

If instrument does not have an internal 50-ohm termination, an external termination adapter can be used with a high-impedance output.
